

## SUPPORTING THE DIAGNOSIS, PREVENTION AND TREATMENT OF OSTEOPOROSIS

- Identify and manage 'at risk' and sub-optimally treated osteoporosis patients
- Identify, quantify and prioritise necessary clinical activity
- minimise risk of new or further fractures and falls ...  
... and associated unplanned admissions and costs
- Review treatment pathway compliance and service needs ...  
... use of key medications  
... diagnostic procedures and support (eg. dexa scan)
- Create achievable and manageable work plans

*"Just to say how impressed I am by the software. It is very powerful & allows audits to be carried out extremely rapidly. The Filters allow preparation of action lists. I will definitely be recommending this to all practices"* P Brown, GP

*"The GP's have been very impressed. They can see the benefits to both the patients and practice alike and we have begun reviewing patients highlighted by the tool. I would certainly have no hesitation in using or recommending your tools.*

*M McAdoo, Osteoporosis Screening Co-ordinator*

*This is an elegant, simple to use programme that easily identifies our patients at risk of Gluco-corticoid induced Osteoporosis*  
T Fryatt, GP
